## SaphIR Dual Head Emitter

**1584.1**

### SaphIR Dual Head Emitter 1584.1

The 1584.1 Dual-Head IR Micro-Emitter transfers infrared commands from a single output to two audio-video components or other devices. This makes it perfect for use when there are more components to control than there are connections on the controller or hub.

The emitter's two heads attach to the components' IR sensors with adhesive pads. The emitter's cable plugs into an emitter jack on a multiroom controller or hub, or an IR connecting block such as the Russound 857 or IRB-6.

#### Standard Features

- Dual heads control two devices from one IR output
- Miniature heads unobtrusively attach to your equipment
- Plug-in design installs quickly
- 10' (3 m) cable accommodates virtually any component setup
